

Australian Genomics
Health Alliance

Investigating current and future education and training needs of the Australian workforce in genomic medicine

Trainee and consultant rheumatologists are warmly invited to participate in an Australian Genomics Health Alliance study exploring specialists' views and expectations of genomic medicine, and current and future education and training needs. Learning how genomics is perceived by rheumatologists may help tailor future education and training activities to rheumatologists' interests and practices.

Participation would involve a 30-minute telephone interview, at a time convenient for you. If you are interested, please contact Master of Biomedical Science student, Erin Crellin, via email erin.crellin@mcri.edu.au for further details.

All views are welcome, from both paediatric and adult physicians, people with or without genomics experience!
